## Who are we?

ENSUS Consulting is a consulting and services firm operating at the interface between science, government and industry. We provide tailor-made Regulatory Affairs dossier management services to national and international customers covering all aspects of dossiers related to chemicals legislations (Biocides, REACH, CLP). In order to further expand our small regulatory affairs team, we are seeking a highly motivated new colleague.

## What will you be doing?

After an initial period of training on-the-job, you will soon be expected to work independently. You will support companies in their regulatory challenges related to chemical products, mainly biocides, thereby providing both legal and scientific advice. You will coordinate and support regulatory dossiers, both for national and European regime, from A to Z. While we strongly value the capacity to work independently, it is also essential to cooperate with your colleagues, external partners and experts, authorities and our (inter)national customers.

## Who are we looking for?

The ideal candidate should:

- be a recent graduate (Master or PhD level) in a life sciences discipline (chemistry, biology, biosciences,...).
- be eager to develop expertise in the main aspects involved in dossier preparation: analytical chemistry, microbiology, efficacy, (eco)toxicology, exposure assessment, risk assessment, modelling, classification and labelling, ...
- preferably have relevant experience in research projects, through internships or industry trainee programmes. While demonstrated experience in executing regulatory projects (BPR, REACH, CLP, ... ) would be beneficial, it is not strictly required.
- preferably have a background and/or experience in toxicology, although this is not strictly required.
- have the following analytical skills: a keen eye for detail, collecting and analysing data with a critical eye, enjoying solving complex problems.
- have excellent writing and organisational skills, good interpersonal skills, responsibility and a critical mind.
- be fluent in written and spoken English, any additional language skills (Dutch, French, German, ... ) are of course highly valued.

- have sound skills in Microsoft Office Word, Excel and PowerPoint, and will become proficient in IUCLID 6, a software application to manage scientific data on chemicals which is used in the implementation of various regulatory programmes, after an on-the-job training.

## **What do we offer?**

We offer an inviting work environment in an international context with ample opportunities to grow and develop, and with space for own initiative and responsibility. Since we value a correct work-life balance, we offer flexible working hours, with the option to work partially from home.

Apart from a competitive salary, we also offer extra-legal benefits and bonuses.

## **Interested to join our team?**

If you believe you have the broad range of interests and skills required for this job, please contact us at [jobs@ensusconsulting.com](mailto:jobs@ensusconsulting.com). Please send us a full CV and a motivation letter, with focus on personality, why you feel you have a passion for working as a Regulatory Affairs Consultant, and explain how you see your professional future.
